

In a rapidly evolving world, innovation isn't just an option, it's a necessity. The insurance industry, once traditional and steady, now finds itself at a crossroads.

00:13

Seeking new horizons, meet a forward thinking team from Succeed Insurance. Succeed Insurance's team realizes that the world of drones is expanding.

00:23

It's not just a hobby, it's an industry. Succeed wants to capitalize on this new upcoming industry.

Alright, team. Today we embark on an exciting journey

00:32

to create a drone insurance app. Meet our lead developer, Mark. Hi everyone. Together we'll be using Jutro Digital Platform, a powerful front-end

00:42

development platform, to make this happen. Jutro Digital Platform offers a suite of powerful tools to simplify our journey from ideation

00:51

to customer satisfaction. It provides a design system and UI library that comes with a set of prebuilt UI components and design tokens.

A React based framework that matches the UI components and patterns in design. Jutro Web Apps, which is a UI based developer workflow engine

01:07

access via your Guidewire Cloud home account, allowing you to create, manage, and deploy your P&C web apps. A digital software development kit

01:16

to help developers integrate their Jutro apps with InsuranceSuite, and experience templates, which are ready to use applications with boilerplate code,

01:25

including components, example pages, layouts, and styling. It's a starting point for developers to jumpstart their development of P&C web experiences

01:33

providing a defined structure and functionality. Before we dive in, we need to understand our users.

Sarah, can you share the insights from our

01:43

recent user research? Absolutely. We conducted interviews and surveys with commercial drone business owners, operators, and insurance agents. The research showed that commercial drone business owners

01:50

require an app that provides instant and easy access to insurance coverage, drone health monitoring, and real-time updates on policy information.

Our first step consisted of expressing our business idea by creating a drone insurance line of business in Advanced Product Designer,

02:11

which we then synchronize with InsuranceSuite. Jutro's design system is a valuable resource in Figma. It's like having a dynamic design playground

02:18

for rapid prototyping, where the team leverages experience templates and uses design tokens to create themes, making branding and updates a breeze. Designs take shape,

02:26

and flexibility is the key. Jutro Digital Platform empowers the team to design with the agility needed for the rapidly evolving drone industry.

02:37

Using Jutro Web Apps, Mark and the team of developers start their development process by creating an application from an experience template

02:45

where they were able to define the new app to match the drone insurance line of business. Mark, tell us what happened

02:53

next. Sure. We then hit Create application and a process was triggered that goes through several phases. Our app had then its own source code repository and Bitbucket, as well as a set of Team City pipelines for building, testing, and deploying it to Guidewire Cloud Platform.

03:08

It was then accessible from our Jutro web app's tenant view. We were then able to access the source code on the Bitbucket

03:15

repository where the application code was provisioned, where we were able to clone it and start making changes to the application.

03:22

We then used Jutro's React based frontend framework to map the Figma app designs and code. We were pretty impressed. It's more than just a foundation.

03:29

It fueled our speed and agility. Unlike traditional frameworks, Jutro digital platform libraries come with prebuilt components tailored for insurance needs.

03:38

This means we can add or change features swiftly, ensuring our app stays agile while maintaining industry specific quality and functionality.

03:47

And as you know, Sarah, integration is key. Jutro digital platform provides a software development kit that comes complete with helper functions

and UI extensions to easily integrate it with InsuranceSuite core applications where our new drone insurance product was added after designing it in Guidewire's Advanced Product Designer.

04:04

It's all about creating one cohesive experience across multiple apps. The digital SDK generator is key in generating the SDK

04:15

without which our developer would've had to spend hours and hours writing code. To integrate with InsuranceSuite, we utilize Jutro web apps,

04:23

essentially a control center for deployment. We configured our app settings, assigned necessary permissions and defined user access levels easily.

04:31

Once everything was set up, a simple click initiated deployment, seamlessly pushing our app live and making it instantly accessible

04:39

to commercial drone business owners seeking insurance coverage. Today we've transformed a vision into reality. Our Jutro based drone insurance app is a testament

04:46

to the innovation that Jutro Digital Platform brings to the table, and we are just getting started. In addition to the successful deployment,

Jutro's comprehensive toolkit facilitated testing and allow the team to implement necessary updates for an optimized app experience. Succeed Insurance has already experienced the transformative

05:03

power of Jutro digital platform by building its app in record time from initial design to live deployment.

If Succeed Insurance can innovate,

05:14

so can you. Embrace Jutro Digital Platform, your gateway to navigating the skies of innovation in the insurance world.
